

## DS BENNETT

The information in this document is current as at July 2018.  
For updated information after this date, please refer to NVT results.

### DS BENNETT

- High yielding, awnless winter wheat
- Australian Standard white (ASW) classification for South east and Southern Zones
- Ideal for graze and grain or straight grain production
- Suitable for sowing from mid March
- Excellent disease package: MRMS for YLS; R for stripe; MR stem rust
- As a wheat, provides alternative herbicide control options compared to oats and other forage crops

### BREEDING

DS Bennett was bred from a complex cross via the HRZ program, targeting improved BYDV tolerance and YLS resistance in a milling class winter wheat. This line was selected through Dow Seeds southern wheat breeding program.

### PLANT TYPE

DS Bennett is a tall awnless wheat ideally suited to the high and medium rainfall zones, with an early planting opportunity.

In graze and grain operations optimal sowing time is from mid-March through to early May. DS Bennett provides excellent biomass accumulation. In situations

where grazing is not applicable a later sowing will help to manage excessive biomass.

DS Bennett is a full winter wheat, with photoperiod sensitivity, such that it will generally flower 7-10 days later than EGA Wedgetail. DS Bennett's photoperiod genes lead to a consistent flowering time across a range of environments generally occurring later in the optimal flowering window, thus helping to reduce the risk of frost exposure.

DS Bennett provides strong YLS and stripe rust resistance.

### FOR BEST RESULTS

Sowing window mid-March until early May.

- Sow early for grain and graze situations; manage biomass with grazing.
- Sow later for non-graze situations to manage biomass accumulation.

### PBR and EPR

DS Bennett is protected by Plant Breeders Rights (PBR). In regard to propagating material (planting seed) of this variety, any unauthorised commercial production or reproduction, conditioning for propagation, offering for sale, sale, import, export or stocking of propagating material is an infringement under the Plant Breeders Rights Act 1994. Grower to grower trading of seed of DS Bennett is allowed from 2020-21.

DS Bennett growers will be subject to a Licence Agreement at the point of purchase that acknowledges an End Point Royalty (EPR) payment of \$4.25/tonne excluding GST to be paid on all production other than retained planting seed.

### SEED AVAILABILITY

Seed is available through your Seednet partner: AGF Seeds; AG Schilling & Co; Auswest Seeds; Baker Seeds; Booleroo Centre Seeds; Colrae Seeds; Galleon Grains; Hart Bros; RH Verner & Co; Minnipa Agricultural Centre; Modra Seeds; multiSEED Productions.
